First response:

hello, you have reached difelice's hvac, how may I help you?!?

Questions a customer might reply with.

My AC isn't working...

We should reply by asking set questions in order to help narrow down what our technicians will be going to a house and troubleshooting...

1. Q. What specifically is your air conditioning system doing? Making strange noises, blowing warm air, not turning on(inside or outside)?

2. Q. Did this problem happen all the sudden, or did it worsen over time?

3. Q. How old is your system?

4. Q. When did you last change your air filter?

5. Q. Has any other home service provider (i.e. siding/roofing/landscaping) companies been working on your house recently?

6. Q. Is your system leaking water outside?

7. Q. Does your system keep running nonstop?

8. Q. Is there an odor when the system starts (musty/burnt smell)?

9. Q. Do we need to bring a ladder for access?

10. Q. On a scale of 1 to 10, how severe/detrimental is your issue?

11. Q. Is there ice forming outside at the condenser connections?

12. Q. When was the last time an AC company provided you with any assistance with your equipment?

13. Q. Is your main circuit breaker tripping when the AC starts?

14. Q. what do you normally keep your ac temp set to?

15.

16.
